## ELECTRICAL REQUIREMENTS

## A WARNING

## Electrical Shock Hazard

Plug into a grounded 3 prong outlet.
Do not remove ground prong.
Do not use an adapter.
Do not use an extension cord.
Failure to follow these instructions can result in death, fire, or electrical shock.

A $115 \mathrm{~V}, 60 \mathrm{~Hz}, \mathrm{AC}$ only 15 A or 20 A fused, grounded electrical supply is required. It is recommended that a separate circuit serving only your refrigerator and approved accessories be provided. Use an outlet that cannot be turned off by a switch. Do not use an extension cord.

## WATER PRESSURE REQUIREMENTS

A cold water supply with water pressure of between 35 psi and $120 \mathrm{psi}(241 \mathrm{kPa}$ and 827 kPa ) is required to operate the water dispenser and ice maker. If you have questions about your water pressure, call a licensed, qualified plumber.

## Reverse Osmosis Water Supply

IMPORTANT: The pressure of the water coming out of a reverse osmosis system going to the water inlet valve of the refrigerator needs to be between 35 psi and $120 \mathrm{psi}(241 \mathrm{kPa}$ and 827 kPa ).

If a reverse osmosis water filtration system is connected to the cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 psi to 60 psi (276 kPa to 414 kPa ).

LOCATION REQUIREMENTS

## Explosion Hazard

Keep flammable materials and vapors, such as gasoline, away from refrigerator.
Failure to do so can result in death, explosion, or fire.

To ensure proper ventilation for your refrigerator, allow for $1 / 2$ " $(1.25 \mathrm{~cm})$ of space on each side and at the top. Allow for 1" $(2.54 \mathrm{~cm})$ ) of space behind the refrigerator.
